

# Light Reflection Value/ LRV

Proportion of visible light reflected by a surface, weighted for the sensitivity to light of the human eye. This is equivalent to CIE Tristimulus Y10 when viewed under illuminant D65 and when measured with the appropriate specimen and measurement geometry.

The approximate light reflectance value (LRV) of a colour indicates the amount of visible light that a colour will reflect. Black has a light reflectance value of 0% and absorbs all light.

The surfaces are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 100% and keeps a building light and cool. All colours fit within these two extremes.
